

17/10/2022

**Dear Hiring Manager,**

I am writing to recommend Ismet Seyhan. He worked with us at Yapı Kredi one of Turkey's leading technology banks, between 01.05.2021 - 23.10.2021 as a Junior Java Developer and reported to me in my position as Customer Management Application Development Manager.

During his term of office, he fulfilled his responsibilities in an Agile team of 9 people by the Scrum methodology. His main task has been to carry out new projects and maintenance work in the banking application's customer management and CRM perspective, customer creation/update/deletion, contact information, and relationship processes of our bank. The development environment he experienced can be summarized as Oracle DB in a multilayered architecture, a backend running on Spring Framework, and an HTML5-based frontend environment. While working in these environments, he has successfully used technologies such as PL/SQL, Hibernate, Java, Spring, Maven, SOAP, HTML, and JavaScript. He also managed job/defect management and CI/CDI processes by Atlassian products. He quickly adapted to the feedback given and adapted to our practice of developing high-quality code in a short time.

During his time with us, he quickly adapted to the team and the work and produced both high-quality and understandable outputs. I would recommend Ismet for your Java Working Student position because of his teamwork orientation, unafraid to take initiative and high perception. I have no doubt that he will adapt to the team and the project in a short time.

**Best Regards.**

**Ezgi Zümrüt Ulaş**

CUSTOMER MANAGEMENT APPLICATION DEVELOPMENT MANAGER
